

SMS Management — Feature Spec

Product area: CRM Marketing

PM: M. Bourguignon

Fidelity: Near-production

Platform: Arenamatrix web app (CRM Marketing module)

Date: 2026-06-16

1. Context

SMS Management gives marketing managers a native way to create SMS campaigns and analyze their performance directly inside Arenamatrix CRM Marketing. Today this is done in an external tool (Brevo), which keeps SMS disconnected from the contact base, segments, and the rest of the customer view — forcing duplicate work and split reporting. The current setup is being replaced now because Brevo offers no interface flexibility and its unicity-key model (SMS + email) clashes with Arenamatrix's email-only keys, breaking contact imports on every campaign. The struggle is per-campaign and high-severity: every send means exporting contacts and fighting import/unicity errors in a tool the team can't adapt.

2. Goals

1. A marketing manager can build an SMS campaign end-to-end (template, segment selection, config) and reach a send/review step — without leaving Arenamatrix.
2. A marketing manager can create and reuse an SMS template.
3. A marketing manager can view per-campaign performance (messages sent, delivery rate, click rate) and read an analysis of results.

Not in scope

- The back-end sending mechanics / delivery infrastructure (the actual dispatch); the builder ends at a review/send step.
- Segment/contact creation — the builder consumes existing CRM segments, it does not create or edit them.
- Cost, opt-out, and revenue-attribution metrics (V1 KPIs are sent / delivery / click only).

3. User stories

Story 1

As a...	Marketing manager
I want to...	Build, configure, and reach send for an SMS campaign from Arenamatrix
So that...	I stop exporting contacts to Brevo
Acceptance criteria	Can create/select a template and personalize content + variables; can set sending number, send date, and target segment (existing CRM segment); can review and trigger send (dispatch mechanics out of scope)
Empty state	"No SMS campaigns yet. Create your first campaign."
Error state	"Couldn't load your campaigns. Retry."
Loading state	Skeleton matching list + KPI strip

Story 2

As a...	Marketing manager
I want to...	View per-campaign KPI cards and charts
So that...	I can judge performance and improve the next send
Acceptance criteria	Headline KPI strip (messages sent, delivery rate %, click rate %); dataviz charts breaking down delivery and clicks; filtering/changing view does not reload the page
Empty state	"No data yet — this campaign hasn't been sent." / "No campaigns sent in this period."
Error state	"Couldn't load performance data. Retry."
Loading state	Skeleton KPI cards + chart placeholders

4. Screens

Screen	Linked stories	Notes
Campaigns list	1	Default tab. Search + status filter + tag filter (filter in place, no reload). Rows: name, status dot (Draft/Sent), last-edited date, #ID, edit, : menu (Duplicate / Rename / Delete). Click a row → opens campaign in builder (draft) or report (sent). "+ Create campaign" launches the full-page builder.
Campaign builder	1	Full-page overlay flow launched by CTA. Two-pane: editor (60%) + live phone preview (40%). Sections as a checklist with completion ticks: Message content, Sender, Recipients (existing segment), Config (sending number, send date). Live character/segment counter (xxx/160, n SMS) with special-char/emoji warning, no hard block. Variables highlighted in editor, sample values in preview. "Send test" + "Send" — Send enabled only when required sections complete. Auto-saves as Draft on close.
Statistics	2	Tab view. Date-range picker scopes the whole view (updates in place). KPI strip: Messages sent (count), Delivery rate (%), Click rate (%). Dataviz: delivery & clicks over time. Per-campaign table (ID / Name / Sent / Delivered % / Clicked % / Date / report) with CSV export. Per-row "report" opens a slide-in side panel over the table; X / click-outside to close.

Mock data

Entity	Key fields	Volume	Notes
SMS Campaign	id (#), name, status (Draft/Sent), lastEdited, sendDate, senderName, segmentId, messageBody, charCount, smsSegments, recipients, messagesSent, deliveryRate %, clickRate %	5 (4 Sent · 1 Draft)	One very long name (truncation); one Sent campaign with poor delivery (~85%) and near-zero click; Draft has no performance values
Segment	id, name, contactCount	4	One large (~92k) and one tiny (~40)
Sender number	id, label (e.g. "VElectro"), number	3	One alphanumeric sender ID vs. numeric
Personalization variable	token (e.g. {firstname}), sampleValue	~4	One long sample value pushing message past 160 chars
Performance time-series	date, deliveredPct, clickedPct	per sent campaign / aggregated	One dip day for a visible downward trend

5. Constraints

Constraint	Value
Stack / framework	Arenamatrix design system
Accessibility	WCAG AA
Data & GDPR	None specified
Other	Good and scalable performance

Open questions

Question	Owner	Status
Kill criteria to watch post-launch: <~30% of active marketing managers send ≥1 SMS from Arenamatrix in the first quarter	M. Bourguignon	Monitor

6. Pre-send checklist

- ✓ Context is one clear paragraph — who, what, why
- ✓ At least 1 goal uses outcome language
- ✓ At least 1 non-goal is stated explicitly
- ✓ Every story has acceptance criteria
- ✓ All 3 edge states are specified for every story
- ✓ Every screen is listed with a description
- ✓ At least 1 mock data entity is defined
- ✓ All open questions have an owner
