

Consents V3 — Feature Spec

Product area: CRM Marketing · **PM:** M. Bourguignon · **Fidelity:** Near-production

Platform: Web (Arenamatrix CRM) · **Date:** 2026-06-08

△ **Agent notes:** The following were inferred and folded into the spec — happy paths for both stories; empty/error/loading states; the no-reload / export / partial-failure guidelines; the "no consent-definition editing" non-goal; and three derived mock-data entities (evolution series, channel breakdown, activity log). The "Ask AI" CTA is a placeholder only — no behaviour is defined beyond a clickable button.

1. Context

Arenamatrix users need to manage consents — lists of contacts who have opted in for a specific purpose (newsletters, SMS promotions), a marketing channel, or a behaviour (analytics) — to stay GDPR-compliant. The primary user is the marketing manager who creates and relies on these consents to segment campaigns; the DPO/compliance officer sits in the background as an audit reader. Today they're stuck on a bare-bones V2 page (Optin Management) that only shows a flat list with technical identifiers: no way to see how a consent evolves over time, no logs, no history. V3 turns that static list into a living, auditable view of consent over time.

2. Goals

1. Compare the evolution over time of multiple consents side by side.
2. From any consent, open a detail view exposing its KPIs, evolution chart, and activity log.
3. At the overview level, understand the breakdown of consents per channel.
4. Surface KPIs on consent evolution (overall headline strip + per-consent).

Not in scope

- Launching or executing campaigns / re-opt-in actions from the page — V3 is read/analyse only (at most: create segment or deep-link out).
- Individual contact activity detail — that lives in the contact record; this page stays at the aggregated level.
- Hard delete of consents (deactivate only).

3. User stories

Story 1

As a...	marketing manager
I want to...	view and compare consents' evolution on a graph
So that...	I spot which are growing or eroding
Acceptance criteria	Can select multiple consents (max 6) and see their evolution overlaid on one graph; Can change the date range (3m/6m/12m/since 01/01) and the graph updates in place (no reload); Can see consents broken down per channel at the overview level
Empty state	No consents yet. Create your first consent. (chart zero-state: "Select a consent to see its evolution")
Error state	Couldn't load consents. Retry.
Loading state	Skeleton of KPI strip + charts + list

Story 2

As a...	marketing manager
I want to...	open a consent record and see its KPIs, evolution, and activity log
So that...	I have an auditable history
Acceptance criteria	Detail drawer shows per-consent KPIs (net trend, opt-in/out rates, contacts); Activity log lists created / updated / deactivated events with timestamps; Can export this consent's report (CSV/PDF)
Empty state	No activity recorded yet.
Error state	Couldn't load this consent. Retry.
Loading state	Skeleton of the drawer detail view

Story 3

As a...	user
I want to...	a CTA on the overall page to ask AI questions about consents
So that...	I have a future entry point for AI insights
Acceptance criteria	Button is present and clickable on the overview — no further behaviour prototyped for now
Empty state	n/a
Error state	n/a
Loading state	n/a

4. Screens

Screen	Linked stories	Notes
Consents Overview	1, 3	Single scrollable page. Header (title + live consent count; CTAs: options overflow, Export, Ask AI placeholder, Create a consent). KPI strip (active opt-ins + new vs reference date, active consents, opt-in rate; updates with date range). Evolution chart (lighter multi-line; removable consent chips + Add capped at 6 with tooltip; time toggle 3m/6m/12m/since 01/01; updates in place; zero-chips in-chart empty state). Channel-breakdown chart (compact stacked bar / donut beside evolution; share of opt-ins per channel). Consents list (banner rows kept from V2 — name + opt-in-type tag, channel, created date, contacts + trend %, inline sparkline, overflow menu; search + filters; identifier columns removed; deactivated consents show a status tag and stay in list). Row click opens the Detail drawer.
Detail drawer	2	Right-side overlay; overview stays visible, dimmed. Header (consent name + opt-in-type tag + channel; close button). Per-consent KPIs (net opt-in trend, opt-in & opt-out rates, contacts). Single-consent evolution chart (lighter). Activity log (system-generated created/updated/deactivated/reactivated events with timestamps + author where available). Export this consent (CSV/PDF). Closes via close button AND clicking the dimmed overview.
Create drawer	—	Same right-side drawer in create mode. Form to add a consent (name, purpose, channel, opt-in type). Clicking outside with unsaved input asks "Discard this consent?" before closing.

Mock data

Entity	Key fields	Volume	Notes
Consent	id, name, opt-in type (single/double), channel (Email/SMS/WhatsApp/Push), purpose, status (active/deactivated), created date, contacts (count), net trend (%), opt-in rate (%), opt-out rate (%)	7 (spread across different channels)	1 very long name (banner truncation); 1 deactivated (status tag, dropped from active KPIs); 1 negative trend (SMS -8%, eroding line); 1 near-zero/flat contacts (flat line); 1 recently created (sparse history)
Consent evolution series	consentId, month, volume (count)	~12 monthly points per consent	One clearly declining series + one flat series (tests "spot eroding consent" + flat-line render)
Channel breakdown	channel, opt-in volume (count), share (%)	per channel (Email, SMS, WhatsApp, Push)	One channel with near-zero share (tests stacked/donut tiny slice)
Activity log entry	consentId, event (created/updated/deactivated/reactivated), timestamp, author (where available)	3–6 per consent	A deactivated→reactivated sequence (tests the deactivation decision)

5. Constraints

Stack / framework	Arenamatrix design system
Accessibility	WCAG AA
Data & GDPR	Consents exist to evidence GDPR opt-in; export (CSV/PDF) provides audit proof
Other	Good and scalable performance; no page reload on filter/date-range change

Open questions

Question	Owner	Status
"Ask AI" CTA — what does it actually do beyond being a clickable button?	M. Bourguignon	Deferred — placeholder only for V3
Create-consent form — exact field set and validation rules	M. Bourguignon	Open
Export format — CSV, PDF, or both, and what each contains	M. Bourguignon	Open

6. Pre-send checklist

- ☑ Context is one clear paragraph — who, what, why
- ☑ At least 1 goal uses outcome language
- ☑ At least 1 non-goal is stated explicitly
- ☑ Every story has acceptance criteria or an explicit note that they are missing
- ☑ All 3 edge states are specified for every story
- ☑ Every screen is listed with a description or wireframe reference
- ☑ At least 1 mock data entity is defined
- ☑ All open questions have an owner
